

TD Health eZine

Multiple Impulse Therapy

Arrives in Holland in September 2010

CE
Awarded to
the
PulStar

On September 17 & 18, 2010 TD Health Solutions held its first MIT Certification Seminar in Gouda Netherlands.

The seminar was offered to the principal owner and staff of Blaauw Practice in Gouda Netherlands, and the attendees were thoroughly instructed in the the foundation knowledge,

treatment protocols and had substantial hands-on time to apply the MIT. Actual patients were treated and the PATIENT results were effective on 1st visit.

The reaction of the attendees was complete satisfaction with the educational & business services offered by TD Health Solutions.

MIT: Keys to Success

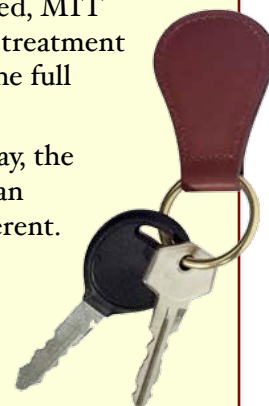

If you can't measure outcomes, why move forward with a treatment program?

More and more doctors find that running an evidence based practice makes more sense than reliance upon subjective patient inputs and response.

The cornerstone of MIT is the ability to collect baseline readings of the entire spine BEFORE and treatment takes place. AND, no matter what treatment method is used, MIT collects post treatment readings of the full spine/

In this way, the treatment plan remains coherent.

**MIT
IS A
PRACTICE
"ENABLER"**

PORTABLE PULSTAR -ULTIMATE FLEXIBILITY

CAPABILITY, VERSATILITY & EFFICIENCY define the PORTABLE PULSTAR.

This system is perfect for every clinic, a house call, a presentation at the golf pro shop or a visit to an industrial customer. Install a flatscreen display on the wall of the treatment room, connect the portable to it and you have an outstanding patient education system right in front of you. Comes complete with a high impact case with wheels that can be checked as luggage. [Click here for more information](#)

PATIENT EDUCATION MODULE

Any age can follow along easily and learn about the spine and how chiropractic can help. also, by using the 3d Model you are showing your patients that you keep your office up to date.

The draw panel offers a large interface, drawing tools such as brushes, airbrush mode, color picker, history panel, notes panel, print button, and a handy transparency slider.

You may also hide the color panel and brushes panel. You may also rotate the model 360 degrees.

A perfect tool to bring alive the patient education session. Whether the discussion focuses upon a general review of the musculoskeletal structure or a specific discussion of the 4 stages of degeneration, this is the module for you.

Add notes and print the picture for your records too.

Research Shows that MIT Is Very Effective in Treating Low Back Pain

This graph shows the rate of recovery of patients suffering from low-back pain treated with physical

therapy, osteopathic, general medicine and Multiple Impulse Therapy of the spine.

Patients treated with Multiple Impulse Therapy recovered much more quickly than patients treated with other methods.

Please examine all of the published research papers on our site at:

www.td-health.com/Research.html

Multiple Impulse Therapy Benefits to both Doctor & Patient

- Detect spinal stiffness in less then 1 minute
- Simultaneously Treat Hard and Soft tissue
- Permit conjugation with any technique
- Offer the most repeatable and reliable instrument adjusting modality
- Enables effective treatment for musculoskeletal complaints
- On-going Research supports MIT

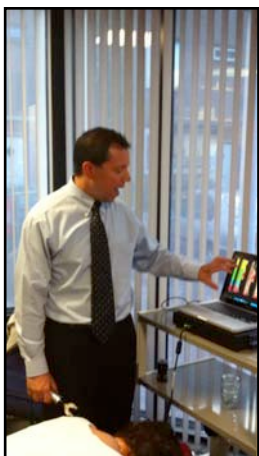

DID YOU KNOW

MIT IS COMPATIBLE WITH EVERY CHIROPRACTIC TECHNIQUE. Deployment of MIT becomes even easier because the doctor and staff can either immediately or progressively implement MIT. Take the first step and contact TD Health Solutions for more information on deploying MIT across your clinic operation.

TD HEALTH INTRODUCES ST+
SOFT TISSUE IMPULSE TREATMENT PROTOCOL

Multiple Impulse Therapy (MIT) now includes a robust post graduate program on soft tissue treatment protocols, simply called ST+.

You will be amazed at the way in which you can evaluate, measure and treat soft tissue disorders. ST+ offers many protocols for the soft tissue problems that the doctors will find with their patients. These soft tissue protocols will treat multiple muscular problems that need to be treated to get better results on their patients. ST+ covers pressure point treatments, scrapping of the fascia, reorganization of muscle fibers and much more.

ST+ complements the MIT adjusting protocols to give the doctor better results in the clinical setting. We look forward to teaching you ST+ at our upcoming events.

For more information, goto our website at www.td-health.com.

PATIENTS WANT BETTER OUTCOMES

MIT can ENABLE better outcomes AND at lower total patient cost.

- MIT is the next generation of documented patient assessment & treatment
- MIT is supported by research.
- MIT integrates with ANY technique
- Deployment is easy to accomplish with our 5 Level Certification Program
- The patient database records every detail of the treatment cycle.
- The best time to to deploy MIT is TODAY
- *We are given only 24 hours each day & we must use that time to make a difference in our life and in the lives of our patients.*
- *TODAY is the best day to make the decision that can positively influence your tomorrow.*

TD's MIT Certification Program Focused for Success

TD Health explains, demonstrates and then YOU explain & demonstrate the protocols repeatedly throughout the certification training.
